Graduate Employment Outcomes

In 2019, 76% of graduates were in full-time employment, four months after completing their course. Three years later, in 2019, the proportion of the same cohort of graduates in full-time employment had risen to 91.4%. The proportion of graduates in employment four months after completing their course in 2016 was 87.1%, but three years later, 93.3% of the same cohort of graduates had found some form of paid employment.

Preparedness and Qualification

The percentage of graduates who were working full-time in managerial or professional occupations three years following graduation.

Study areas showing large gains in the proportion of graduates in these occupations include:

- Engineering
- Humanities
- Science & Engineering
- Health

Graduates most agreed that their qualification provided less preparation in the foundational area of numeracy and that their original qualification had provided strong preparation for their current job. Graduates indicated that their qualification had provided relatively strong preparation in these areas.

Graduates indicated that their qualification had provided strong preparation for their current employment, and to what extent these had prepared them for their current job.

Graduate Attributes Scale

88% AGREEMENT

Graduate Attributes Scale

The GOS-L also asks graduates about the generic work-related skills they had acquired as part of their original qualification and to what extent these had prepared them for their current employment.
